

## Envisioned outcomes of Climate Change Summit

1. Attention to green buildings policy
2. Focus on recycle programmes
3. Renewable energy program for Eden
4. Implementation of coastal management programmes
5. Determine floodplains for rivers to inform spatial development frameworks and plans in municipalities
6. Alien vegetation eradication program to improve water quantity and quality
7. Wetlands rehabilitation programmes
8. Improved sustainable agricultural practices
9. Understanding of urban development best practice
10. Promotion of conducive tourism and recreational practices
11. Promotion of clean industries Implementation of pro-active deforestation measures
12. Improved partnerships with global stakeholders
13. Understanding and addressing the challenges of population growth
14. Environmental education program in schools
15. Pro-active public awareness programmes with emphasis on social – well being
16. Compiling of a framework whereby parameters are set and amended to mitigate the impact of climate change in the areas in question – coastal regions and the little Karoo
17. Setting up of public – private partnerships to address impacts
18. Attention to comprehensive storm water master planning and implementation
19. The broadening of capacity to revitalise wetlands as natural buffering systems against possible extreme weather conditions
20. The setting of a more environmentally friendly Spatial Development Framework for the districts in question whereby the long-term effect of developments are taken into account as well as the vision for the development inside Eden after the year 2030
21. Carbon sequestration Plan
22. Economic / Business initiatives to reduce carbon footprints
23. Compilation of an Eden Climate Change Adaptation Plan and implementation
24. Green labelling and auditing of best practice
25. Revising Low Cost Housing norms and standards to make previously disadvantaged less vulnerable to the effects of climate change
26. Biodiversity Monitoring Programme on trends of changing climate on both the terrestrial and aquatic biospheres, to feed into international database
27. Implementation of clear plan of action to include all role-players via a climate change charter.
